

MANASVI MANOJ YEOLE

Pimple Saudagar, Pune – 411027 | 8554941777 | manasviyeole@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Year-2 B.E.Computer Science undergraduate at I²IT Pune carrying a 9.18 CGPA alongside two national hackathon gold finishes. Invited by Atos to explore internship pathways after standing out at their Hackathon Challenge. My projects lean toward problems that matter — stopping real-time PII leakage into LLMs, and using reinforcement learning to model epidemic control strategies. I hold seven active student-body roles across IEEE, ACM, GDG, and YI, because I believe the best engineers also know how to build communities.

EDUCATION

Qualification	College / School	University / Board	Year	CGPA / %
B.E. (Computer Science)	I ² IT, Pune	Savitribai Phule Pune University (SPPU)	2024 – Present	9.18 / 10
HSC (12th)	M.P. International School & Jr. College, Pune	HSC – Pune Board	2024	84.68%
SSC (10th)	Infant Jesus High School, Pune	SSC – Pune Board	2022	93.80%

TECHNICAL SKILLS

Cybersecurity: PII interception & redaction, browser extension security, CTF problem-solving, privacy-by-design, secure AI tooling

AI / ML: Supervised & unsupervised learning, deep neural networks, Q-Learning, YOLOv8 computer vision, SEIR epidemic modelling, LLM integration, dataset curation & evaluation

Frontend Development: React.js, JavaScript (ES6+), HTML5, CSS3 — component architecture, state management with hooks, single-page application design, responsive layout

Programming Languages: Python, JavaScript, Java, C++, C

Frameworks & Tools: React.js, NumPy, Pandas, YOLOv8, Roboflow, Git, GitHub

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Full-Stack Development

PROJECTS

AI-Native Intent-Centric App Development | React.js, JavaScript, HTML5, CSS3 🏆 *Shortlisted — Atos Hackathon Challenge*

A platform where a business user types what they want in plain language and an LLM pipeline translates that intent into a deployable application specification

- Owned the entire frontend — structured the application as a three-view React SPA: an intent capture screen, an AI output viewer showing the generated architecture and schema, and a compliance validation dashboard.
- Prioritised accessibility for non-technical stakeholders — the interface was deliberately kept as approachable as a messaging app so that anyone in a business team, regardless of coding background, could initiate and review an application build.
- Worked closely with the backend and AI members of the team to close the loop from user input through LLM processing to a reviewed, validated specification ready for deployment.

PrivacyGuard AI | Python, JavaScript, Browser Extension

🏆 *Winner – Ciphathon, MIT-WPU (1st / 60–70 teams)*

A real-time privacy shield that silently scrubs sensitive personal and credential data before it reaches any LLM

- Engineered a browser extension that sits between the user and any AI tool — scanning outgoing text for Aadhaar numbers, passwords, API secrets, and financial identifiers, then redacting them on the fly before the request leaves the browser.
- Paired it with a companion IDE plug-in (PII Blocker) that watches for credential strings being fed into AI code assistants like GitHub Copilot and stops them at the source.

- Shipped a public demo at privacyguardai.vercel.app; project took first place at Ciphathon, the national cybersecurity hackathon at MIT-WPU, Pune.

EpiControl-AI | Python, React.js, Reinforcement Learning

🏆 **Winner – CUKCS-Althon & Fusion, SIOM**

An epidemic simulation environment where a Q-Learning agent autonomously discovers and tests intervention strategies

- Formulated the disease spread problem as a reinforcement learning task — the agent navigates an SEIR/SER environment and learns which combination of lockdowns and vaccination rollouts minimises projected case counts.
- Generated a fully synthetic patient dataset in Python (NumPy, Pandas) to train the model without relying on sensitive health records; included a real-time correction loop to handle distribution drift.
- Assembled the full product — Python simulation engine on the backend, React.js interactive dashboard on the frontend with bar-chart visualisations — so evaluators could run and compare intervention scenarios live.
- First shown at Fusion Hackathon, SIOM (100–150 teams); iterated and won the Science & Resilience track at CUKCS-Althon, Central University of Karnataka. Code: github.com/Manasvi-hub/Epicontrol-AI

AI-Based Cattle Breed Classification | YOLOv8, Python, HTML/CSS

SIH 2025 Participant

A computer vision system that identifies cattle breeds in real time from a live video stream

- Assembled and curated a bespoke training set of 2,000+ images spanning multiple cow and buffalo breeds, handling annotation entirely in Roboflow before fine-tuning a YOLOv8 detection model to breed-level accuracy.
- Wired an IP Webcam feed into the inference pipeline so the model could process live footage rather than static images, making the system practical for on-farm deployment.
- Wrapped the output in a lightweight HTML/CSS web page that rendered detection results and confidence scores in real time against the incoming video stream.

SCHOLASTIC ACHIEVEMENTS & AWARDS

- **9.18 CGPA** — Secured across the entirety of Year 1, B.E. Computer Science, I²IT Pune.
- 🏆 **Atos Hackathon Challenge — Internship Shortlist** Recognised by Atos and invited to apply for internship roles following the AI-Native App Development event.
- 🏆 **Ciphathon — 1st Place** National-Level Cybersecurity Hackathon, MIT-WPU, Pune; topped a field of 60–70 competing teams.
- 🏆 **CUKCS-Althon — 1st Place, Science & Resilience** National 24-hour hackathon, Central University of Karnataka; won with team Neural Nexus.
- **CTF — Ranked 10th** All-Women Capture The Flag competition run in collaboration with IIT Trust Lab at I²IT Pune (April 2025); team Cyber Valkyries cleared all five challenges.
- Smart India Hackathon 2025 — built a YOLOv8-powered cattle breed classifier selected to represent the college at the national internal round.
- Speaker events & workshops: E-Cell Illuminate (IIT Bombay), IEEE Congress 2025 (Fergusson College), Google Cloud Study Jam (GDG-MITWPU).

POSITIONS OF RESPONSIBILITY

I²IT, Pune — Student Bodies

2024 – Present

- IEEE — Membership & Development Lead (2025–26)
- ACM — Web Development Member (2025–26)
- YI (Young Indians) — Public Relations Head (2025–26)
- CESA — Events Member (2025–26) | FESA — Secretary (2024–25) | GDG — Point of Contact (2024–25) | Cybersecurity Club — Member (2024–26)

VOLUNTEERING & COMMUNITY

- On-ground volunteer, NASSCOM Confluence Technology 2024, Pune — one of India's most attended enterprise technology summits.
- Organising team member, Agile Testing Agency – Global Testing Retreat (ATA-GTR) 2024, Pune.
